

MotoScan Android

Manual installation of APK file

Getting the app onto your Android device

Manual installation using a browser on the device

1. Download the APK file from the MotoScan website using the browser on your device.
2. Accept the download. The notification bar will display the download
3. Run it on the device by selecting it from the notification bar.
4. Press Install, and it will install automatically

Manual installation using a USB connection from a PC

1. Download the APK file and place it in the downloads folder on the device (using the File Explorer)
2. On the device, open the File Manager and double click on the APK file to install
3. Press Install, and it will install automatically

When installed on the device

1. Please pair your device with your profile in this configurator tool
2. In My Account, please create / write down the PIN code
3. On the device, type in your account login (example: your-email@gmail.com) and enter your PIN code
4. The device will now pair with your account.

On the configurator tool

1. Go to My Devices. Here you will see your paired devices
2. Go to Configurations: A default config is already made ready for you, if you are happy with that, you do not need to change anything - or you can: Add new configuration (Android icon), Build up the configuration with your needed functions, Choose the connection type, Build the menus and workflow, Save the configuration
3. Go to My Devices: The device has selected the default configuration. Change it if needed
4. Start using the scanner to capture data
